#### THERMAL RESISTANCE MAXIMUM RATINGS (Note 1)

|---|-----------------|-------|------|

| Junction-to-Ambient - Steady State (Note 3) | $R_{\theta JA}$ | 49    |      |

- 1. The entire application environment impacts the thermal resistance values shown, they are not constants and are only valid for the particular conditions noted.
- 2. Psi  $(\Psi)$  is used as required per JESD51-12 for packages in which substantially less than 100% of the heat flows to single case surface.
- 3. Surface-mounted on FR4 board using a 650 mm<sup>2</sup>, 2 oz. Cu pad.
- Continuous DC current rating. Maximum current for pulses as long as 1 second is higher but is dependent on pulse duration and duty cycle.
