STANDARD DISPENSERS

High density polyethylene bottles, with one touch stainless steel pump.

Fluid Content 8 ounce

87-302-0 Bulk

These Dispensers are made of high density polyethylene. The stainless steel automatic fluid dispenser prevents toxic fumes and spills. A precision valve seals the contents in the bottle until required, increasing safety for the user. The pump action allows you to dispense only as much fluid as needed, preventing evaporation and spills. The unique cap seal stops the fluid from dripping back into the bottle causing any contamination and a hinged lid protects the dish when the bottle is not in use.
