# SYSMAC CS Series Position Control Units CS1W-NC 3

CSM\_CS1W-NC\_DS\_E\_6\_<sup>\*</sup>

# High-speed, High-precision positioning with 1, 2, or 4 axes

- Versatile functions and superb performance enable the construction of compact, high-performance machines.
- With its ultra-compact size of  $31 \times 90$  mm (W  $\times$  H), this highly space-efficient Position Control Unit (PCU) enables up to 4 axes of motor control.

CS1W-NC113

CS1W-NC213

CS1W-NC413

# Features

- Two types to choose from: open collector output and line driver. Because both open collector output and line driver types feature 1-, 2-, and 4axis models, the most appropriate model can be selected for the application at hand.
- Positioning START occurs within 2 ms (maximum speed) after receiving a command from the Programmable Controller. (Refer to the Operation Manual for conditions.)
- High-speed data transfer is possible using INTELLIGENT I/O WRITE (IOWR) and INTELLIGENT I/O READ (IORD) instructions.
- Fine control from low to high speed (500 kpps max.) is possible in 1-pps units.
- Positioning can be done from memory, by writing an operating pattern into the PCU memory in advance. Three position patterns Terminating, Automatic, and Continuous – can be set with completion codes to respond to a wide range of operations. Positioning of up to 100 patterns (sequential data) per one axis can be possible.
- Positioning (direct operation) can be done by direct PLC ladder commands for position data, speed data, and acceleration data. This simplifies control in situations when the target position and speed cannot be decided until immediately before operation begins, or when the target position and speed change due to other circumstances. The target position and speed can also be changed during operation.
- Interrupt feeding moves the axis a specified amount, then stops it, in accordance with an interrupt input. High-speed (0.1 ms max.) processing
  of the interrupt input signal ensures high-precision interrupt positioning. This helps to maximize feeder precision.
- Easy-to-Use positioning can be possible with versatile functions such as Teaching, Override, Backlash compensation, Zones, Forced interrupt and Acceleration/Deceleration curve.

# **Ordering Information**

#### **International Standards**

- The standards are abbreviated as follows: U: UL, U1: UL(Class I Division 2 Products for Hazardous Locations), C: CSA, UC: cULus, UC1: cULus (Class I Division 2 Products for Hazardous Locations), CU: cUL, N: NK, L: Lloyd, and CE: EC Directives.
- Contact your OMRON representative for further details and applicable conditions for these standards.

Note: 1. The additional functions supported by Unit version 2.0 can be used only when the PCU is installed with a CS1-H CPU Unit (either CPU Unit Ver. 2.0 or Pre-Ver. 2.0 CPU Unit). These functions cannot be used if the PCU is installed with a CS1 CPU Unit (with -V1 suffix). For details on Unit versions, refer to *Unit Versions of CS-series Position Control Units* on Operation Manual page vi.

2. When performing linear interpolation, the distances that can be moved will vary.

| Name    | Color     | Status   | Explanation                                                                                                                                                                   |  |  |  |  |
|---------|-----------|----------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|--|
|         | RUN Green |          | Lit during normal operation.                                                                                                                                                  |  |  |  |  |
| RUN     | Green     | Not lit  | Hardware error, or PLC notified of PCU error.                                                                                                                                 |  |  |  |  |
| 5D0 D I |           | Lit      | An error has occurred.                                                                                                                                                        |  |  |  |  |
| ERC     | Red       | Not lit  | No error has occurred.                                                                                                                                                        |  |  |  |  |
| ERH     | Red       | Lit      | An error has occurred IN the CPU Unit.                                                                                                                                        |  |  |  |  |
| ЕКП     | Red       | Not lit  | No error has occurred at the CPU Unit.                                                                                                                                        |  |  |  |  |
|         |           | Lit      | Either a CW/CCW limit signal or an emergency stop input signal is being input. At this time the LED indicator for the relevant axis (X to U) will flash.                      |  |  |  |  |
| SENS    | Yellow    | Flashing | Either a parameter loss, a data loss, or an operating data area designation error has occurred.                                                                               |  |  |  |  |
|         |           | Not lit  | None of the above has occurred.                                                                                                                                               |  |  |  |  |
|         |           | Lit      | Data is incorrect (e.g., the parameters or positions transferred are out of the permissible range). At this time the LED indicator for the relevant axis (X to U) will flash. |  |  |  |  |
| DATA    | Yellow    | Flashing | The check of all data (parameters, positions, etc.) following power up shows that data is lost or corrupted.                                                                  |  |  |  |  |
|         |           | Not lit  | None of the above has occurred.                                                                                                                                               |  |  |  |  |
|         |           | Lit      | Pulses are being output to the X axis (either forward or reverse).                                                                                                            |  |  |  |  |
| Х       | Orange    | Flashing | An error has occurred, such as incorrect cable type for the X axis or faulty data.                                                                                            |  |  |  |  |
|         |           | Not lit  | None of the above has occurred.                                                                                                                                               |  |  |  |  |
|         |           | Lit      | Pulses are being output to the Y axis (either forward or reverse).                                                                                                            |  |  |  |  |
| Y       | Orange    | Flashing | An error has occurred, such as incorrect cable type for the Y axis or faulty data.                                                                                            |  |  |  |  |
|         |           | Not lit  | None of the above has occurred.                                                                                                                                               |  |  |  |  |
|         |           | Lit      | Pulses are being output to the Z axis (either forward or reverse).                                                                                                            |  |  |  |  |
| Z       | Orange    | Flashing | An error has occurred, such as incorrect cable type for the Z axis or faulty data.                                                                                            |  |  |  |  |
|         |           | Not lit  | None of the above has occurred.                                                                                                                                               |  |  |  |  |
|         |           | Lit      | Pulses are being output to the U axis (either forward or reverse).                                                                                                            |  |  |  |  |
| U       | Orange    | Flashing | An error has occurred, such as incorrect cable type for the U axis or faulty data.                                                                                            |  |  |  |  |
|         |           | Not lit  | None of the above has occurred.                                                                                                                                               |  |  |  |  |

Note: 1. For the CS1W-NC113/NC133, this applies only to the X axis; for the CS1W-NC213/NC233, it applies only to the X and Y axes.
 When not all of the axes are used for the CS1W-NC213/NC233/ NC413/NC433, either connect the CW/CCW limit inputs for the unused axes to the input power supply and turn them ON or set the contact logic to N.O. Connect the emergency stop to the input common and turn it ON. If it is not connected, the ERC indicator will light. Operation will be normal, however, for all axes that are used.

# Functions Supported by Each Unit Version of Position Control Unit

| Unit Version                                                         |                                                                                                                           | Pre-Ver. 2.0                     | Ver. 2.0                                                                  | Ver. 2.1                                                                  | Ver. 2.2                                                                                                           | Ver. 2.3                                                                                                                                            |

Note: 1. The Position Control Unit must be installed with CS1-H CPU Unit to use the above functions supported for Position Control Unit Ver. 2.0. These functions cannot be used if the Position Control Unit is installed with a CS1 CPU Unit (with -V1 suffix).
With CX-Position Ver. 1.0, new functions added to Position Control Units Ver. 2.0 or higher cannot be used.

3. Please refer to the Operation Manual Page vii for the Unit Version.

# **Connecting Connectors Using Servo Relay Units**

Wiring requires the dedicated cables.

Position Control Unit Cables, Servo Relay Unit, Servo Drive Cable are sold separately.

Read and understand this catalog.

Please read and understand this catalog before purchasing the products. Please consult your OMRON representative if you have any questions or comments.

Warranties.

(a) Exclusive Warranty. Omron's exclusive warranty is that the Products will be free from defects in materials and workmanship for a period of twelve months from the date of sale by Omron (or such other period expressed in writing by Omron). Omron disclaims all other warranties, express or implied.

(b) Limitations. OMRON MAKES NO WARRANTY OR REPRESENTATION, EXPRESS OR IMPLIED, ABOUT NON-INFRINGEMENT, MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OF THE PRODUCTS. BUYER ACKNOWLEDGES THAT IT ALONE HAS DETERMINED THAT THE

PRODUCTS WILL SUITABLY MEET THE REQUIREMENTS OF THEIR INTENDED USE.

Omron further disclaims all warranties and responsibility of any type for claims or expenses based on infringement by the Products or otherwise of any intellectual property right. (c) Buyer Remedy. Omron's sole obligation hereunder shall be, at Omron's election, to (i) replace (in the form originally shipped with Buyer responsible for labor charges for removal or replacement thereof) the non-complying Product, (ii) repair the non-complying Product, or (iii) repay or credit Buyer an amount equal to the purchase price of the non-complying Product; provided that in no event shall Omron be responsible for warranty, repair, indemnity or any other claims or expenses regarding the Products unless Omron's analysis confirms that the Products were properly handled, stored, installed and maintained and not subject to contamination, abuse, misuse or inappropriate modification. Return of any Products by Buyer must be approved in writing by Omron before shipment. Omron Companies shall not be liable for the suitability or unsuitability or the results from the use of Products in combination with any electrical or electronic components, circuits, system assemblies or any other materials or substances or environments. Any advice, recommendations or information given orally or in writing, are not to be construed as an amendment or addition to the above warranty.

See http://www.omron.com/global/ or contact your Omron representative for published information.

#### Limitation on Liability; Etc.

OMRON COMPANIES SHALL NOT BE LIABLE FOR SPECIAL, INDIRECT, INCIDENTAL, OR CONSEQUENTIAL DAMAGES, LOSS OF PROFITS OR PRODUCTION OR COMMERCIAL LOSS IN ANY WAY CONNECTED WITH THE PRODUCTS, WHETHER SUCH CLAIM IS BASED IN CONTRACT, WARRANTY, NEGLIGENCE OR STRICT LIABILITY.

Further, in no event shall liability of Omron Companies exceed the individual price of the Product on which liability is asserted.

#### Suitability of Use.

Omron Companies shall not be responsible for conformity with any standards, codes or regulations which apply to the combination of the Product in the Buyer's application or use of the Product. At Buyer's request, Omron will provide applicable third party certification documents identifying ratings and limitations of use which apply to the Product. This information by itself is not sufficient for a complete determination of the suitability of the Product in combination with the end product, machine, system, or other application or use. Buyer shall be solely responsible for determining appropriateness of the particular Product with respect to Buyer's application, product or system. Buyer shall take application responsibility in all cases.

NEVER USE THE PRODUCT FOR AN APPLICATION INVOLVING SERIOUS RISK TO LIFE OR PROPERTY OR IN LARGE QUANTITIES WITHOUT ENSURING THAT THE SYSTEM AS A WHOLE HAS BEEN DESIGNED TO ADDRESS THE RISKS, AND THAT THE OMRON PRODUCT(S) IS PROPERLY RATED AND INSTALLED FOR THE INTENDED USE WITHIN THE OVERALL EQUIPMENT OR SYSTEM.

#### Programmable Products.

Omron Companies shall not be responsible for the user's programming of a programmable Product, or any consequence thereof.

#### Performance Data.

Data presented in Omron Company websites, catalogs and other materials is provided as a guide for the user in determining suitability and does not constitute a warranty. It may represent the result of Omron's test conditions, and the user must correlate it to actual application requirements. Actual performance is subject to the Omron's Warranty and Limitations of Liability.

#### Change in Specifications.

Product specifications and accessories may be changed at any time based on improvements and other reasons. It is our practice to change part numbers when published ratings or features are changed, or when significant construction changes are made. However, some specifications of the Product may be changed without any notice. When in doubt, special part numbers may be assigned to fix or establish key specifications for your application. Please consult with your Omron's representative at any time to confirm actual specifications of purchased Product.

Errors and Omissions. Information presented by Omron Companies has been checked and is believed to be accurate; however, no responsibility is assumed for clerical, typographical or proofreading errors or omissions.

In the interest of product improvement, specifications are subject to change without notice.
