

## Safety Limit Switch

Small, Economical Switch Featuring a Positive Opening Mechanism and CE Marking

- Contacts opened by positive opening mechanism (NC contacts only)
- Double insulation makes ground terminal unnecessary (Bears □ marking)
- Conforms to EN (TÜV) standards corresponding to the CE marking
- Wide standard operating temperature range: -30°C to 70°C
- Conforms to these standards and EC Directives:
  - Machinery Directive
  - Low Voltage Directive EN50047
  - EN1088 (slow-action models only)

### Approved Standards

## ■ CHARACTERISTICS

Degree of protection	IP65 (EN60947-5-1)
Life expectancy (see note 2)	Mechanical: 15,000,000 operations min. (see note 3) Electrical: 150,000 operations min. (Refer to <i>Operating Characteristics</i> for snap-action.)
Operating speed	1 mm/s to 0.5 m/s (with D4D-1120N)
Contact gap	Snap-action: 2 x 0.5 mm min. Slow-action: 2 x 2 mm min.
Operating frequency	Mechanical: 120 operations/min min. Electrical: 30 operations/min min.
Rated frequency	50/60 Hz
Insulation resistance	100 M $\Omega$ min. (at 500 VDC) between terminals of the same polarity and between each terminal and non-current-carrying metal parts
Contact resistance	25 m $\Omega$ max. (initial value)
Dielectric strength	Snap-action U <sub>imp</sub> 2.5 kV between terminals of the same polarity U <sub>imp</sub> 4 kV between each terminal and non-current-carrying metal parts Slow-action U <sub>imp</sub> 4 kV between terminals of the same polarity, between terminals of different polarity, and between each terminal and non-current-carrying metal parts
Rated insulation voltage (U <sub>i</sub> )	400 V (EN60947-5-1)
Switching overvoltage	1,500 V max. (EN60947-5-1)
Pollution degree (operating environment)	3 (EN60947-5-1)
Conditional short-circuit current	100 A (EN60947-5-1)
Conventional enclosed thermal current (I <sub>the</sub> )	10 A (EN60947-5-1)
Protection against electric shock	Class II (double insulation)
Vibration resistance	Malfunction: 10 to 55 Hz, 0.75-mm single amplitude
Shock resistance	Destruction: 1,000 m/s <sup>2</sup> min. Malfunction: 300 m/s <sup>2</sup> min.
Ambient temperature	Operating: -30°C to 70°C (with no icing)
Ambient humidity	Operating: 95% max.
Weight	Approx. 70 g (for D4D-1120N) Approx. 86 g (for D4D-5120N)

Note: 1. The above figures are initial values.

2. Life expectancy values are calculated at an operating temperature of 5 to 35°C, and an operating humidity of 40 to 70%. Contact your OMRON sales representative for more detailed information on other operating environments.
3. The mechanical life expectancy of the fork lever lock model is 10,000,000 operations min.

# Engineering Data

## ■ ELECTRICAL LIFE EXPECTANCY (1NC/1NO CONTACT, SNAP-ACTION)

( $\cos\phi = 1$ )

( $\cos\phi = 0.4$ )

## Nomenclature

### Head

With roller lever models, the direction of the switch head can be varied to any of the four directions by loosening the roller lever switch screws at the four corners of the head.

### Built-in Switch

Wide switch variations.  
Snap-action: 1NC/1NO  
Slow-action: 1NC/1NO  
2NC

### Conduit Opening

Available in two different types of conduit threads:  
Pg 13.5: European standard (1-conduit, 2-conduit)  
G 1/2: Japanese standard (1-conduit, 2-conduit)  
1/2-14NPT: US standard (1-conduit)

### Safety-Oriented Lever Setting

Grooves which engage the lever every 90° are cut in the operation indicator disk to prevent the lever from slipping against the rotary shaft. There are resin-lever and metal-lever types.

### Cover

Easy to open and wire. (One mounting screw and opposite side is for hinge mounting.)

### Contact Material

Ag alloy

### Conduit Cap

Can be used as a simple connector under good environmental conditions.

Note: 1. Contact operation

Closed    Open

2. Terminals are numbered according to EN50013. Contact forms are according to EN60947-5-1.

■ POSITIVE OPENING MECHANISM

1NC/1NO Contact (Snap-Action)

Conforms to EN60947-5-1 Positive Opening

If metal deposition between mating contacts occurs on the NC contact side, they can be pulled apart by the shearing force and tensile force generated when part B of the safety cam or plunger engages part A of the movable contact blade. When the safety cam or plunger is moved in the direction of the black arrow, the Limit Switch releases.

1. When metal deposition occurs.

2. When contacts are being pulled apart.

Safety cam directly pushes up the movable contact blade.

3. When contacts are completely pulled apart.

1NC/1NO Contact (Slow-Action)

Conforms to EN60947-5-1 Positive Opening

When metal deposition occurs, the contacts are separated from each other by the plunger being pushed in.

2NC Contact (Slow-Action)

Conforms to EN60947-5-1 Positive Opening

When metal deposition occurs, the contacts are separated from each other by the plunger being pushed in.

# Precautions

## CAUTION

Do not use metal connectors or conduits to wire the Limit Switch, otherwise the conduit of the Limit Switch may break and an electric shock may be received.

- If the D4D-□N is applied to an emergency stop circuit or safety circuit for prevention of injury, use a D4D-□N model that has an NC contact equipped with a force-separation mechanism, and make sure that the D4D-□N operates in the positive mode. Furthermore, secure the D4D-□N with screws or equivalent parts that are tightened in a single direction so that the D4D-□N cannot be easily removed. Then provide a protection cover for the D4D-□N and post a warning label near the D4D-□N.
- Be sure to connect a fuse with a breaking current 1.5 to 2 times larger than the rated current to the Limit Switch in parallel in order to protect the Limit Switch from damage due to short-circuiting.
- When using the Limit Switch for the EN ratings, use the gl or gG 10-A fuse.

## ■ CORRECT USE

### Operating Environment

The Limit Switch is intended for indoor use only. Using the Limit Switch outdoors may result in a malfunction.

### Correct Tightening Torque

A loose screw may result in a malfunction. Be sure to tighten each screw to the proper tightening torque as shown below.

No.	Type	Torque
1	Terminal screw	0.59 to 0.78 N • m
2	Cover mounting screw	0.78 to 0.88 N • m
3	Head mounting screw	0.78 to 0.88 N • m
4	Lever mounting screw	1.57 to 1.77 N • m
5	Switch mounting screw (M4)	0.49 to 0.69 N • m
6	Connector	1.77 to 2.16 N • m 1.37 to 1.77 N • m (see note)
7	Cap screw	1.27 to 1.67 N • m

Note: This applies to the 1/2-14NPT connector.

## Mounting

Fasten the Switch with two M4 Allen-head bolts and washers. Provide a stud with a diameter of  $4^{+0.05}/_{-0.15}$  and a height of 4.8 mm max. at two places as shown below so that the Switch is firmly fixed at four points.

**Changing the Lever Angle**

- To change the angle of the lever, loosen the lever mounting screw. Then the lever can be set at any angle in 7.5° increments.
- The length of a variable roller lever can be changed by loosening the lever mounting screw.
- The lever mounting position may be inside out after removing the lever mounting screw. Make sure that the lever will not touch the Switch when the lever is mounted inside out.

**Changing the Head Direction**

If the head direction has been changed, check the torque of each screw and make sure that the screws are free of foreign substances, and that each screw is tightened to the proper torque.

**Wiring**

- Do not connect the bare lead wires directly to the terminals but be sure to connect each of them by using an insulation tube and M3.5 round solderless terminals and tighten each terminal screw within the specified torque range.
- The proper lead wire is 20 to 14 AWG (0.5 to 2.5 mm<sup>2</sup>) in size.

- dz dia. 3.7
- D dia. 4.5
- B: 7.0
- L: 20.2
- F: 7.7
- l: 9.0 (mm)

Perform wiring for the crimp terminals in the orientation shown below, so that they are not resting on the case or the cover.

**Processing the Conduit Opening**

Tighten the connector to a torque of 1.8 to 2.2 N • m (1.37 to 1.77 N • m if it is a 1/2-14NPT). Excessive tightening torque may damage the casing. To satisfy IP65, apply sealing tape to the connector conduit.

The diameter of the cable must be suited to the corresponding connector.

When performing wiring, close conduit openings in any places that will not be used using the cap screws provided as accessories. Tighten the screws to the applicable torque.

**Applying the Load**

Applying a load to the switch actuator (roller) from a slanted direction may deform or damage the actuator, or deform or damage the rotary spindle, so make sure that the dog is straight.

With rubber roller lever models, the rubber roller may turn white with the passage of time, but this will not affect the quality of operation.

**Recommended Connector**

Conduit size	Manufacturer	Model	Applicable cable diameter
G1/2	OMRON	SC-6	7.5 to 9.0 mm
	LAPP (see note 1)	ST-PF1/2 5380-1002	6.0 to 12.0 mm
	Ohm Denki (see note 2)	OA-W1609	7.0 to 9.0 mm
Pg13.5	LAPP (see note 1)	ST13.5 5301-5030	5.0 to 12.0 mm
1/2-14NPT	LAPP (see note 1)	ST-NPT1/2 5301-6030	6.0 to 12.0 mm

- Note: 1. LAPP is a German manufacturer.  
2. Ohm Denki is a Japanese manufacturer.
