# TELEPHONE ACCESSORIES

## ADSL FILTER

An ADSL Filter is a must if you have a digital subscriber line for your internet connections and use the same line for regular telephone communications. The ADSL Filter will prevent interference to your telephone and facsimile from the ADSL signals. It also prevents your fax and voice signals from interfering with the data moving in and out of your computer via the DSL connection.

No. **75-211**

## PHONE LINE RF FILTER

This device will eliminate hissing, humming, scratching, False rings and radio interference. It provides noise suppression and reduces electromagnetic interference. Ideal for cordless phones, answering machines, fax machines, data communication and modems.

No. **TEC200**

## PHONE / FAX ANSWERING MACHINE PRIORITY PRIVACY JACK

This device is designed to give user ability for connecting numerous devices to one line phone service and still give one device priority over others. Any device plugged into the telephone / fax jack has priority. The LED will light when device plugged into answering / telephone jack is in use. (This is the subordinate jack). If a user wants to use priority device when subordinate device is in use, the user waits until LED is not lit or simply cuts in and automatically cuts off signal to subordinate jack. If user attempts to use subordinate device while priority device is in use, there will be no dial tone or signal.

No. **TEC94**

No. **TEC96**

## RECORDER SWITCH

This device is plugged into the phone where handset plugs in, handset cord plugs into switch. In record position simply activate record switch on any recorder and phone conversation will be recorded. In play position, the device will allow playing the recording back through the phone. Device plugs into microphone jack on recorder.
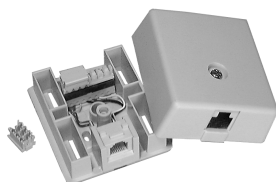

.No. **TEC220**
