Fast Bus 8US and Fast Bus Busbar Adapter System

Introduction

1
2
3
4
5

General

The Fast Bus Multi-Motor Control system is a 3-phase insulated busbar system used to reduce wire connections and hole drilling when building control panels. SIRIUS 3RV/3RT starter combinations built from components and Siemens circuit breakers use Fast Bus for convenient mounting.

Fast Bus is not new to Siemens. However, due to the narrower SIRIUS starter components, more starters will fit on the same run of Fast Bus.

Features

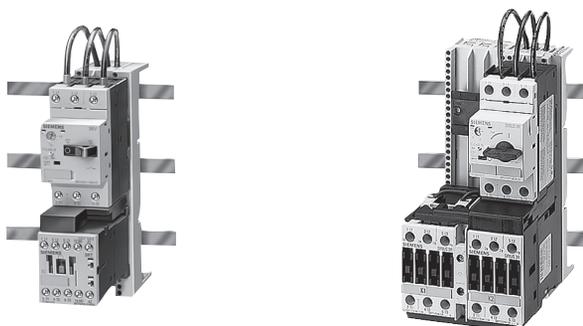

- Simple economical installation
- Compact design
- Requires fewer mounting holes
- Domestic and International approvals
- Touch safe
- Modular design
- Provision for system expansion
- Clip-on shoes provide mechanical and electrical connections to panel mounted busbar
- Main and Feeder breakers mount to busbars

Benefits

- Saves installation time
- Reduces space requirements
- Minimizes layout time
- Allows flexibility for domestic and export business
- Protection for maintenance personnel
- Improves equipment mounting density
- Reduces time and costs associated with system expansion
- Reduces mounting and wiring time and provides trouble free connections
- Allows for quick retrofitting of breakers

How to Select Fast Bus

- 1) Determine the required load.
 - Main lug up to 600A
 - Circuit breakers, 15A to 250A
- If load exceeds 250A, the CB must be separately panel mounted.
- 3) Select 3RV MSP & 3RT contactor components and appropriate adapter shoe or select 3RA factory assemblies.
- 4) Select appropriate length busbar, busbar support kit, insulation covers and any other required components.

General Ratings of Fast Bus System

	IEC	Domestic
Rated operating voltage	690V	600V
Rated insulation voltage, IEC VDE	AC 1000V	N/A
Temperature stability	Up to 105 degrees C	N/A
Busbar support and adapter shoe material	Glass-reinforced polyamide	Same
Color	RAL 7035, light gray	Same

Ampacity

3 single busbars

.19" x .75"	Domestic	362A
5 X 20 mm	IEC	362A

3 double-stacked busbars

.37" x .75"	Domestic	564A
10 x 20 mm	IEC	564A

For technical information on E and F frame circuit breakers used as main and feeder breakers, see section 17

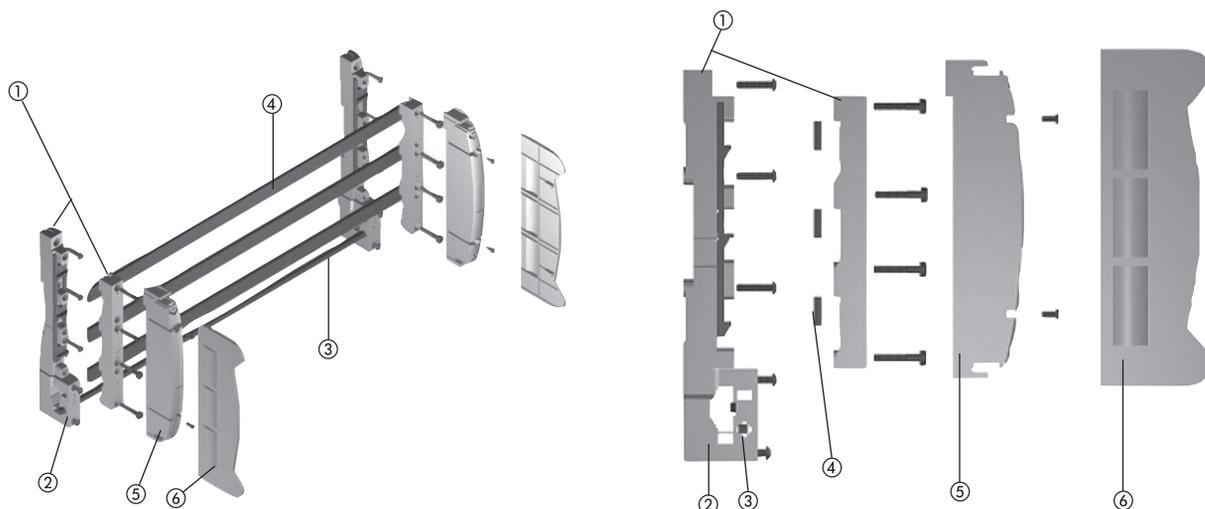

Thermal busbar currents, E-Cu, bare, at 35 °C ambient temperature in accordance with DIN 436711

Busbar dimensions	System	Thermal current at		
		65 °C Busbar temperature A	85 °C A	105 °C A
12 x 5	40 + 60	188	248	295
15 x 5	40 + 60	222	293	349
20 x 5	60	274	362	430
25 x 5	60	327	432	513
30 x 5	60	379	500	595
12 x 10	40 + 60	302	398	474
20 x 10	60	427	564	670
30 x 10	60	573	756	900

Fast Bus

8US and Fast Bus Busbar Adapter System

Introduction

Fast Bus set-up

The Fast Bus system is designed to be easy to use and to save set up time.

8US Busbar holders

Because the 8US Busbar holders are adjustable, they can be used with a number of different busbar sizes allowing you to standardize on one style of busbar holder for busbars with a width and thickness of 12mm x 5mm up to 30mm x 10 mm thus providing a wide range of current carrying capability.

High quality material

Busbar supports and fuse bases are manufactured from glass-fiber reinforced, thermoplastic polyester with the color RAL 7035, light gray. The material ensures excellent mechanical, chemical and electrical properties. Furthermore, the material has an extremely low flammability and meets the requirements of UL 94 V0.

8WC Busbar and busbar systems

The most common size busbar for applications in the US is the 8WC5026 (20mm x 5mm), however there are other styles available depending on your application.

Busbar systems with 40 mm and 60 mm busbar center-to-center clearance have now become firmly established on the world market. In the US market the 60 mm busbar center-to-center clearance is the more commonly used system.

The permissible busbar temperature is a decisive factor when dimensioning the busbars. The busbar temperature is dependent on the current, the current distribution, the busbar cross-section, the busbar surface, the position of the busbar, the convection and the ambient temperature. The values stated in the table on page 5/3 can only be considered as reference values because the conditions vary with each location. The values

are based on constant current over the whole busbar length.

The trend toward busbars proves most advantageous when the incoming supply is centrally located and the load is distributed symmetrically on both sides.

Simple Fast Bus system

The two illustrations above show the very basic items needed when setting up a Fastbus system.

- ① 8US1 Busbar holder (5/10)
- ② 5SH3 Ground busbar support (shown attached however can be mounted separately 5/10)
- ③ Ground busbar 6mm x 6mm
- ④ 8WC Busbar (8WC5026 shown 5/10) FBB36, FBB60 Busbar (5/7)
- ⑤ 5SH3532 profile holder (Holds top partition slotted 5SH3531/non-slotted 5SH3528, and end cover 5SH3533)
- ⑥ End cover 5SH3533 5/9

Short-circuit strength

The short-circuit strength of the busbar system is dependent on the clearance of the busbar holders and on the busbar cross-section.

The short-circuit strength of the whole system is dependent on the short-circuit strength of the busbars and of the adapters with circuit protection.

Applications

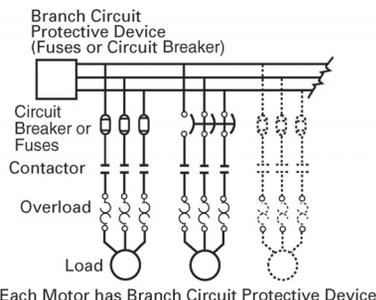

The 8US Fast Bus distribution system is ideal for control panel builders with multiple motor applications. These applications are most common in the material handling, automotive, food processing, pharmaceutical and paper processing industries.

Fast Bus combination starters and group installation assemblies

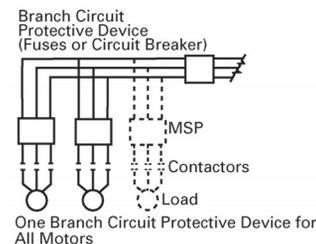

Ratings for Group Installations per NEC 430-53

Group Installation is an approach to building multiple motor control systems in accordance with Section 430-53 of the National Electrical Code. In Group installation, multiple motor starters can be grouped under one short circuit protective device. The 3RV MSP's have been UL listed for use in Group Installations both with and without 3RT contactors when mounted on the Fast Bus system. A 3RT contactor is added when remote operation of the motor is required.

Standard Installation, NEC 430-52

Group Installation, NEC 430-53

MSP Type	Through FLA range Amps	Maximum rating of Group Branch Circuit Protective Device		Short Circuit Current Ratings	
		Fuse	Circuit Breaker	480V	575V
3RV101	0, 11-12	The main fuse should be selected based on the FUSE selection procedure listed below.	The main CB should be selected based on the CIRCUIT BREAKER selection procedure listed below.	65kA	10kA
3RV102	0, 11-12.5			65kA	30kA
3RV103	11-25			65kA	10kA
3RV104	28-100			65kA	30kA

The selection of components for Group Installation is a simple process of the following three steps:

1. Selection of the Branch Circuit Protective Device, fuse or circuit breaker.
2. Selection of the Motor Starter protector based on the motor Full Load Amps.
3. Selection of the 3RT contactor based on the HP and voltage rating of the motor.

Circuit Breaker Selection

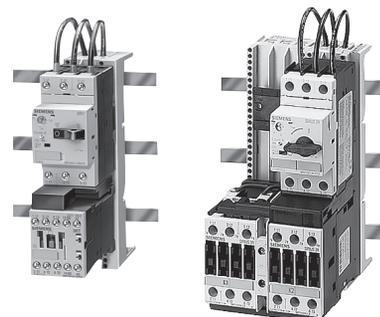

Select a circuit breaker (CB) between:
 Minimum CB size (per NEC430-110):
 Sum of all motor FLC (per NEC table 430-150) x115%.
 Maximum CB size (per NEC430-53c):
 250% x FLC of the largest motor + FLC of all other motors.

Fuse Selection

Calculate the maximum fuse size per NEC430-53c.
 Max Fuse Size = 175% x FLC of largest motor + FLC of all other motors (FLC's from NEC table 430-150).

MSP Type	Through FLA range Amps	Short Circuit Current Ratings (Type E) 1)		
		240V	480Y/277V	600Y/347V
3RV102	0, 11-22	65kA	65kA	30kA
3RV103	11-50	65kA	65kA	25kA
3RV104	28-100	65kA	65kA	30kA (up to 75A)

1) MSP sizes S0 and S3 require additional terminal kits for type E applications. See section 1
