**New Volt Detector Arriving Soon**

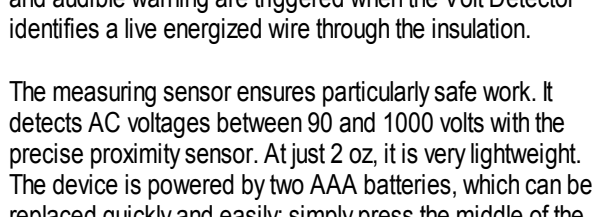

Detects 90-1000 Volts AC With LED Light & Audible Alarm \$26.98  
The Wiha Volt Detector is both handy and easy to use. The integrated LED in the plastic tip illuminates red and emits audible warning as soon as AC voltage is detected. For this, the Volt Detector is simply held adjacent to any terminal or led along an isolated cable using the plastic tip. The LED and audible warning are triggered when the Volt Detector identifies a live energized wire through the insulation.

The measuring sensor ensures particularly safe work. It detects AC voltages between 90 and 1000 volts with the precise proximity sensor. At just 2 oz, it is very lightweight. The device is powered by two AAA batteries, which can be replaced quickly and easily: simply press the middle of the clip, pull back the yellow cap, replace the batteries and replace the cap. As expected the Wiha Volt Detector is tested in accordance with applicable standards. For safe use always check the detector by first testing on a known live energized insulated cable to verify function and working battery levels.

**WARNING!** Insulated Tools are intended to provide protection against accidental contact with energized circuits. For safety purposes we recommend de-energizing all circuits before starting working on any electrical apparatus or conductors. Check insulation on all tools before starting work, do not use tools if insulation has been cut or shows signs of wear or damage to insulation area of the Tool. Always wear eye protection when using hand tools. Use NFPA 70E certified protective outer wear when appropriate
